

Health Tools For Action!

Creating action in health is the reason for our existence.

To accomplish this, we work hard to build tools for health professionals that make it easy to provide action packed care.

Online Portal

GeneSavvy's online portal provides easy access to view the GeneSavvy reports that you've ordered for your clients/patients. Along with easy access to the GeneSavvy reports, our online portal will provide systems to easily manage patient/clients, order new labs, organize and view past labs, order supplements, build pretty action plans, and provide a hub for researching results and treatment options. Using our online portal will also allow us to continuously update report results with new research that comes out and keep you up to the date on the latest genetic research.

Build Pretty Action Plans

GeneSavvy's online portal has a built in action plan generator that utilizes easy searchable menus to select treatment options like supplements, prescriptions, labs, and more. If your patient/client also uses the GeneSavvy online portal, the report as well as the treatment recommendations will be sent to their dashboard for easy tracking and utilization of your treatment recommendations.

Functional Lab Management

Functional labs are an essential part to building effective treatment plans. GeneSavvy builds relationships with functional lab companies around the globe and brings them to our dashboard so you can easily browse and find the standard and specialty labs that will help you gather important health markers. Our team can assist in the ordering process as well as organize new and old labs so you can easily track changes and trends in your patients/clients health right from your GeneSavvy online portal.

Supplements

Supplements have become a powerful tool for health professionals in effective treatment plans. GeneSavvy sources some of the highest quality, professional grade supplements we can find and makes them available for you to easily add any action plan you build. With this system, you can monitor the recommendations you make as well as the actions your patients/clients take and verify compliance.

More Coming!

We are always growing, creating, thinking, and coming up with ways to better serve you. That means that we will continually be adding tools to make your treatments more effective and actionable.
